EDUCATION

University of Massachusetts - Amherst

Sep 2023 - May 2027

BS, Computer Science

- **Relevant Courses:** Artificial Intelligence, Project Management, Software Entrepreneurship, Algorithms, Software Engineering, Physical Computing, Discrete Math, Data Structures & Algorithms, Calculus I, II & III, Computer Systems Principles, Linear Algebra, Object-Oriented Programming.

EXPERIENCE

Capital One

New York, NY, USA

Software Engineering Intern

Jun 2026 - Aug 2026

- Rebuilt Capital One's iOS Remote Deposit Capture (RDC) flow in Swift/SwiftUI - a feature processing \$2.8B in annual deposits for commercial clients, modernizing the capture, validation, and submission pipeline.
- Cut deposit submission time 63% (9s to 3.3s) by re-architecting the submit path to fire deposit and imaging calls eagerly as image resources became available, replacing the legacy sequential request chain.
- Integrated the OneCapture SDK (burst capture, instant OCR, on-device image validation) to catch blurry and invalid check images before upload, slashing the 11% deposit-failure rate driven by poor-quality captures.

Chewy

Boston, MA, USA

AI Engineering Intern

Jun 2025 - Dec 2025

- Automated AI-driven triage of pet prescriptions, cutting review turnaround time by 90% (72 hours to 6), enabling faster processing of ~1M monthly prescriptions.
- Developed production-grade ML model (XGBoost) with 120+ engineered knowledge graph features, achieving 95% accuracy in approval-likelihood predictions.
- Engineered AWS Neptune knowledge graph linking billions of clinical records to power LLM reasoning for drug checks, recommendations, and an AI veterinary copilot.
- Built enterprise AI vision pipeline processing 50K+ veterinary documents monthly, achieving 92% extraction accuracy with automated validation scoring.

Intuit Credit Karma

Charlotte, NC, USA

Software Engineering Intern

May 2024 - Aug 2024

- Engineered 8 cross-platform TypeScript React pages, integrating Apollo GraphQL for backend communication and adhering to federal banking security regulations to protect member data.
- Leveraged Google Cloud Analytics API to design strategic friction, deterring 1000s of fraudulent dispute attempts and saving \$20k-\$50k annually.

PROJECTS

BulletApply

Jan 2025 - Present

- Engineered automated resume tailoring system using Python, FastAPI, and AWS Lambda to optimize application materials for ATS systems, reducing manual customization time from 15+ minutes to under 60 seconds per application.
- Designed hybrid NLP keyword matching system combining Aho-Corasick algorithm with LLM-powered semantic analysis via Gemini API, achieving 40% higher relevance scores compared to keyword-only approaches.
- Architected scalable backend with DynamoDB for user data persistence and S3 for resume storage, implementing RESTful APIs to support 100+ concurrent LaTeX document compilations.

SKILLS

- **Languages:** Python, TypeScript, JavaScript, Swift, SQL, Java, C
- **Frameworks/Libraries:** React, React Native, NextJS, Flask, Apollo GraphQL, XGBoost
- **Cloud/AWS:** AWS Lambda, AWS SageMaker, AWS S3, AWS Neptune, Docker, Google Cloud Platform
- **Data/ML/AI:** OpenAI API, PyTorch, scikit-learn, LangChain, RAG, Neo4j, OpenCypher
- **Databases/Tools:** Snowflake, DynamoDB, PostgreSQL, pgvector, Redis, GraphQL, Poetry, PyMuPDF
